Version V1.0

COLORS

*Reality
vs.
palette*

- *Additive colour mixing is used, for example, on LCD monitors. Colours are added because their components behave like **light sources**.*

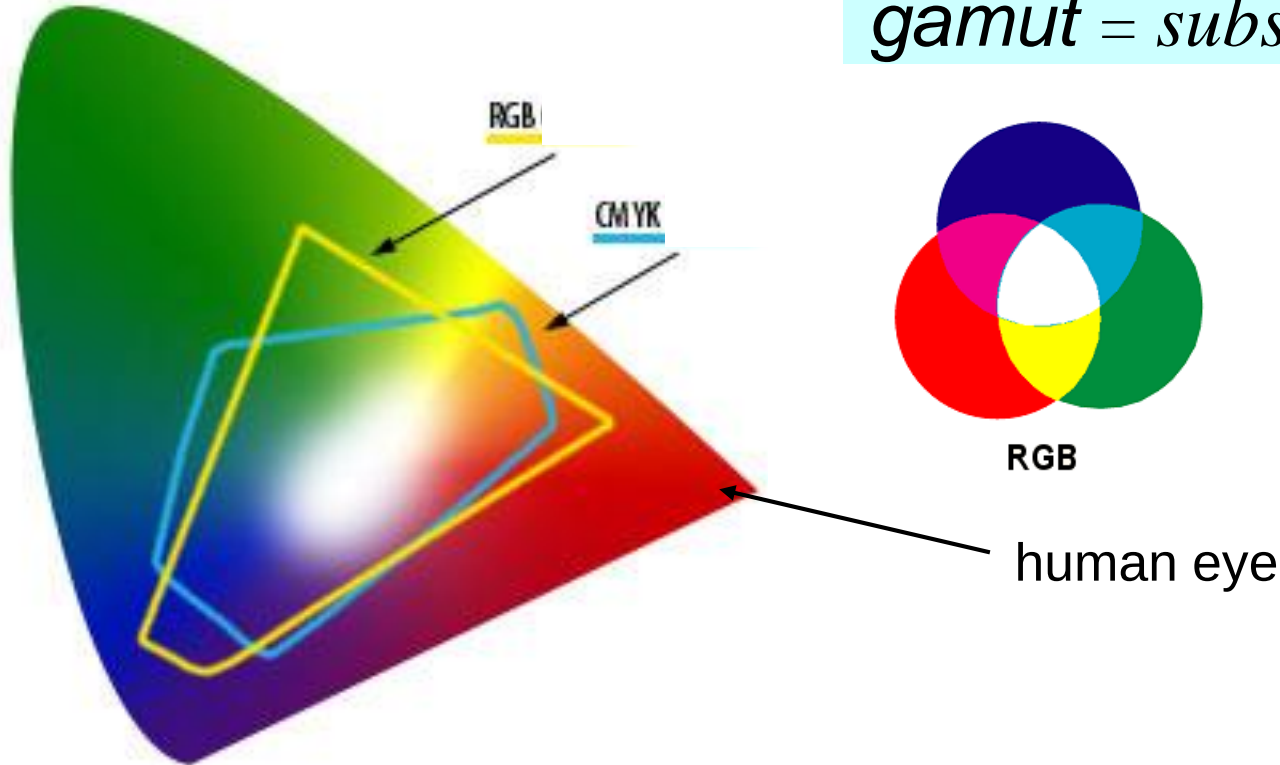

- *Printing applies **subtractive colour mixing***
- the effects of individual colours are subtracted as each component acts as a white light filter.
- *The CMY color cube is obtained by switching the opposite vertices of the RGB cube,
i.e. black to white, yellow to blue, etc..*

$$\begin{array}{l} \text{Cyan} \\ \text{Magenta} \\ \text{Yellow} \end{array} \begin{bmatrix} C \\ M \\ Y \end{bmatrix} = \begin{bmatrix} 255 \\ 255 \\ 255 \end{bmatrix} - \begin{bmatrix} R \\ G \\ B \end{bmatrix}$$

- *The shared black (**cheaper colour**) is updated to CMYK:*
 $K = \min(C, M, Y)$; $C = C - K$; $M = M - K$; $Y = Y - K$;

gamut = subset of colours

- *CMYK has a different **gamut** than RGB, so some RGB colours cannot be printed on conventional printers and some CMYK colours do not appear on RGB monitors!*
- *And you will only see many shades of colour in nature.*

HSV intuitive Color selection

```
LCDpackV2.vhd: function HsvToRGB(H,S,V:natural) return RGB_t
```

It's not too exact because it calculates conversion in integer arithmetic.
