```

```
## Question 4: Signed/Unsigned Bit Value Frequently Tested
```

```
**Question**: What is the decimal value of the 10-bit binary number `10 0000 1111`?
```

```
a) **Unsigned**: _____
```

```
b) **Two's-complement (signed)**: _____
```

```
### Detailed Solution
```

```
---
```

```
Binary: 10 0000 1111  
Position: 9 8765 4321 0  
---
```

```
**a) Unsigned calculation:**
```

```
---
```

$$\begin{aligned} &= 1 \times 2^9 + 0 \times 2^8 + 0 \times 2^7 + 0 \times 2^6 + 0 \times 2^5 + 0 \times 2^4 + 1 \times 2^3 + 1 \times 2^2 + 1 \times 2^1 + 1 \times 2^0 \\ &= 512 + 0 + 0 + 0 + 0 + 8 + 4 + 2 + 1 \\ &= 527 \end{aligned}$$

```
---
```

```
**b) Two's-complement (signed) calculation:**
```

```
Method 1 - Direct calculation:
```

```
---
```

$$\begin{aligned} \text{MSB weight is negative: } &-2^9 + (\text{remaining bits value}) \\ &= -512 + (0 \times 2^8 + \dots + 1 \times 2^3 + 1 \times 2^2 + 1 \times 2^1 + 1 \times 2^0) \\ &= -512 + 15 \\ &= -497 \end{aligned}$$

```
---
```

```
Method 2 - Invert and add 1:
```

```
---
```

$$\begin{aligned} \text{Original: } &10 0000 1111 \\ \text{Inverted: } &01 1111 0000 \\ \text{Add 1: } &01 1111 0001 = 497 \\ \text{So original = } &-497 \end{aligned}$$

```
---
```

```
---
```

```
## Question 5: Equivalent Logic Functions Frequently Tested
```

\*\*Question\*\*: Mark all logic functions that are equivalent to other functions:

```
```vhdl
f1 <= (A xor C) or (A and not C);
f2 <= (B or C) and (not A or B or C);
f3 <= ((C and not B) or (B and A));
f4 <= (A or C) and (not A or not C);
f5 <= (A and not B) xor (A and C);
f6 <= (A and not C) or (C and not A);
```

```

### Solution Method: Karnaugh Map for Each Function

#### f1 = (A xor C) or (A and not C)

| f1  | C=0 | C=1 |
|-----|-----|-----|
| A=0 | 0   | 1   |
| A=1 | 1   | 1   |

$$f1 = A + C$$

#### f2 = (B or C) and (not A or B or C)

| f2  | BC=00 | BC=01 | BC=11 | BC=10 |
|-----|-------|-------|-------|-------|
| A=0 | 0     | 1     | 1     | 1     |
| A=1 | 0     | 1     | 1     | 0     |

#### f3 = (C and not B) or (B and A)

| f3  | BC=00 | BC=01 | BC=11 | BC=10 |
|-----|-------|-------|-------|-------|
| A=0 | 0     | 1     | 0     | 0     |
| A=1 | 0     | 1     | 1     | 0     |

#### f4 = (A or C) and (not A or not C)

| f4  | C=0 | C=1 |
|-----|-----|-----|
| A=0 | 0   | 1   |
| A=1 | 1   | 0   |

\*\*f4 = A C (XOR)\*\*

#### f5 = (A and not B) xor (A and C)

Requires detailed expansion...

#### f6 = (A and not C) or (C and not A)

| f6  | C=0 | C=1 |
|-----|-----|-----|
| A=0 | 0   | 1   |

```

| A=1 | 1 | 0 |
**f6 = A C (XOR)**

### Conclusion
**f4 f6** (both equal A XOR C)
---
```

## Question: RS Latch Circuit Simulation Frequently Tested

\*\*Question\*\*: Given the circuit, write the Q output value for inputs A, B, C at times t0, t1, t2, t3 as

```

~~~
A = ..0.../..1.../..1.../..1...
B = ..0.../..0.../..0.../..1...
C = ..1.../..1.../..0.../..0...

```

```

t0   t1   t2   t3
~~~
```

### Answer

```

~~~
Q = ...1.... / ...0.... / ...0.... / ...1.... /
~~~
```

## Question: Shannon Expansion Frequently Tested

Decompose the function into:

```

~~~
Q = (not Q and f0(A,B,C)) or (Q and f1(A,B,C))
~~~
```

### Solution Method

```

~~~
f0 := f(A,B,C,'0') := (A   B) + (B   C)
f1 := f(A,B,C,'1') := (A   B)
~~~
```

### Karnaugh Map for f0

| f0    | C=0 | C=1 |
|-------|-----|-----|
| AB=00 | 0   | 1   |
| AB=01 | 0   | 0   |
| AB=11 | 1   | 0   |
| AB=10 | 0   | 0   |

### Karnaugh Map for f1

| f1 | C=0 | C=1 |
|----|-----|-----|
|----|-----|-----|

| AB=00 | 1 | 1 |
|-------|---|---|
| AB=01 | 0 | 0 |
| AB=11 | 1 | 1 |
| AB=10 | 0 | 0 |

---

## ## Quick Reference

### ### Signed Number Calculation Formula

- n-bit two's complement range:  $[-2^{n-1}, 2^{n-1}-1]$
- Negative number calculation:  $-2^{n-1} + (\text{remaining bits} \setminus \text{value})$

### ### Equivalent Function Identification Method

1. Draw Karnaugh map for each function
2. Compare if Karnaugh maps are identical
3. Identical functions are equivalent

### ### Shannon Expansion Formula

$$f(x_1, x_2, \dots, x_n, Q) = \bar{Q} \cdot f_0 + Q \cdot f_1$$

Where:

- $f_0 = f(x_1, x_2, \dots, x_n, 0)$
- $f_1 = f(x_1, x_2, \dots, x_n, 1)$
